The array looks like this [Object1.met1, Object2.met3, Object3.met4, Object4.met5, Object5.met6] In this case, Object5.met6 is an integer but it could also be a string, int, etc. I can't get this to work. I've tried: temp = list(object1.met1,object2.met2,object3.met3,object4.met4) This doesn't work, as I can't iterate over it. The only solution I have is this (my main problem is that I want to be able to loop through it. Adding a.remove() to every object, that iterates through the array, is a bit of a pain): temp = [object1.met1, object2.met2, object3.met3] objects = [object1, object2, object3] for i in objects: for j in temp: j.remove() This seems rather clumsy.
